## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Balderson (US 4,983,810) in view of Kronberg (US 5,499,597).

Balderson shows a thermochromic composition in ink that is silk screen printed on a surface, dried and fired to form a solid state on the substrate. The thermochromic composition undergoes the color change according to the heating temperature of the surface. Balderson also shows that the composition can withstand temperature high temperature including the claimed temperature range. However, Balderson does not explicitly show applying the thermochromic composition to a grill surface.

Balderson teaches that its thermochromic composition can be applied in wide variety of heating units which operate at elevated temperature, and Kronberg shows a thermochromic composition applied to a grill surface as well as other hot surfaces including griddle or hot stove. Kronberg further shows that the thermochromic composition can take a warning symbol such as "HOT!" to be more appealing.

It would have been obvious to one of ordinary skill in the art to apply the thermochromic composition to a grill surface or any other surfaces operating at an elevated temperature to forewarn the user the dangerous conditions of the hot surfaces.
